

Subject: VVT learning

Dear customers,

After each change of mapping and change of ECU, it is essential to realize the VVT learning in addition to the pedal / throttle body learning procedure.

The VVT learning is done by performing the crank procedure, mentioned below.

In addition, we remind you that it is advisable to do this procedure before each cold start of your 208R2.

Reminder :

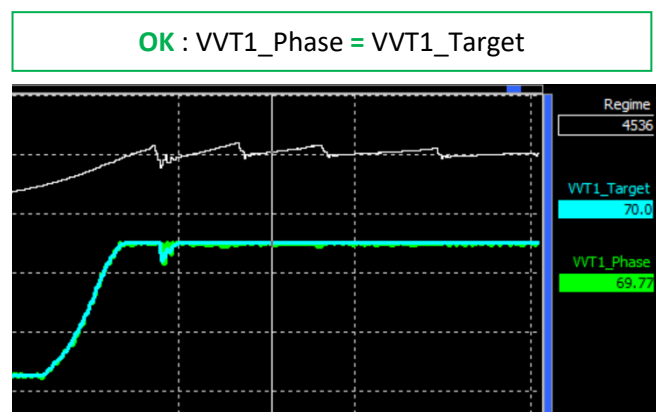

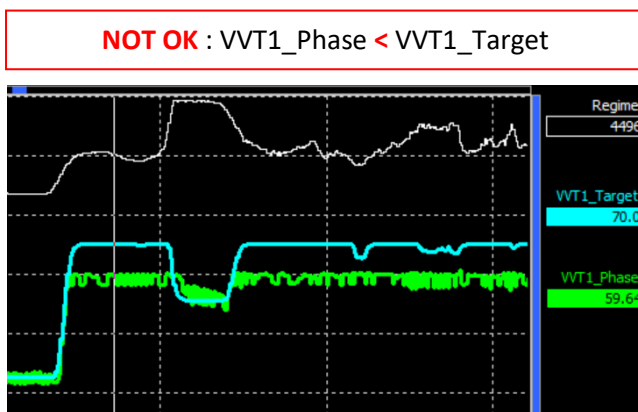

Pedal / throttle body learning procedure

- Main switch OFF ;
- Depress the accelerator pedal fully and hold;
- Main switch ON ;
- Wait for a message to appear on the dashboard;
- Follow the instructions ;

Engine Crank :

- Power OFF, press the horn button and then press the Start button within 5 seconds ;
- You must press the Start button until you reach 5bar of oil pressure.

You can check if the learning has worked correctly via Wintax4, in the "VVT" tab.

Thank you for your attention.
The technical support team.
