

## **ENGINE MAP UPLOAD with USB Data Stick**

### **Procedure**

1. Unzip the zip file received, you should get a file name like this: SRG\_update\_snXXX.bin (XXX = ECU number)
2. Copy the file .bin in the **root** of the USB key referenced 3Z9S25574A.
3. Engine OFF, main switch ON, wait the dashboard to initialize
4. Connect the USB key and wait for 1 min
5. Main switch OFF
6. Remove the map file from the USB key to avoid update each time you connect the key to the car
7. Do a learning procedure

### **Information**

- The map you get is linked to the serial number of the SRG ECU
- Do not modify the name of the map file \*\*\*.bin
- The files SRG\_update\_snXXX.bin have the same names for each fuel maps. So be careful to keep the .zip file that will allow you to see the different fuels.
- The only way (without sysma) to know if the map has been correctly uploaded is to start engine (to register data) and to send us the RFD\_Data file contained in the USB Data Stick afterward.
